[Application Advice](#)

Mixing and spraying

Add the required quantity of REGLONE to water in the spray tank and agitate to give even mixing. Agitate again if left standing. Use clean water only, as suspended soil particles in dirty water will interfere with herbicidal action. For best results an even and complete coverage and good penetration of the spray into the target foliage is necessary. Best results will be obtained when application is made in dull weather or at the end of the day.

Rainfastness

REGLONE is rapidly absorbed and is not affected by rain falling shortly after application.
