

## There's a new player in town for Annual Ryegrass control in wheat

Broadacre  
23.09.2016

ARCADE® is a pre-emergent herbicide from Syngenta containing 800 g/L Prosulfocarb that provides control of Annual Ryegrass in wheat. ARCADE is a Group J (Thiocarbamate) herbicide which offers growers an alternative mode of action for resistance management.

Its key features include:

- Controls Annual Ryegrass including trifluralin (Group D) resistant populations.
- Robust option to increase herbicide diversity for resistance management, either stand alone or in conjunction with tank mixed herbicide programs.
- Alternative to BOXER GOLD® (Prosulfocarb + S Moc) when used in lighter soil types or disc seeding systems.

Additionally, ARCADE provides robust control of Annual Ryegrass when used at 3 L/ha IBS. When it is applied at 2.5 L/ha it provides useful suppression of Annual Ryegrass that can be used as a base for tank mixing to suit conditions and weed spectrum.

Compatible with a range of knockdown and pre-emergent herbicides including SPRAY.SEED®, Glyphosate, LOGRAN B-POWER®, Metribuzin, Diuron, Avadex Trifluralin and Sakura.
