Fungicide

Authorisation Number:

80618/101287

Composition:

125 g/L

Isopyrazam

Formulation:

Emulsifiable Concentrate | EC

Controls black spot and powdery mildew in Apples and black spot in Pears

Product CP: Tabs

[Application Advice](#)

Tank mixing

SEGURIS FLEXI is an Emulsifiable Concentrate (EC) formulation that mixes readily with water and is applied as a spray.

1. Partly fill the spray tank with water.
2. Start the agitation.
3. Add the correct amount of product to the spray tank with the agitation system running.
4. Continue agitation while topping up the tank with water and while spraying.
5. Use the spray mix as soon as possible after preparation.

Mixing and spraying

Application: Ground Application only

Ensure thorough coverage of foliage and fruit. Apply by high volume (dilute) sprayer.

Dilute Spraying:

Use a sprayer designed to apply high volumes of water up to the point of runoff and matched to the crop being sprayed. Set up and operate the sprayer to achieve even coverage throughout the crop canopy. Apply sufficient water to cover the crop to the point of runoff. Avoid excessive runoff. The required water volume may be determined by applying different test volumes, using different settings on the sprayer, from industry guidelines or expert advice. Add the amount of product specified in the Direction for Use table for each 100 L of water. Spray to the point of runoff. The required dilute spray volume will change and the sprayer set up and operation may also need to be changed, as the crop grows.

The chosen spray volume, amount of product per 100 L of water, and the sprayer set up and operation may need to be changed as the crop grows. For further information on spraying, users are advised to consult relevant industry guidelines, undertake appropriate competency training and follow industry Best Practices.

Compatibility

SEGURIS FLEXI is compatible with a range of commonly used fungicides, insecticides, herbicides and fertilizers, including BOGARD 100 WG. Always consult your Syngenta representative before mixing SEGURIS FLEXI with other products. As formulations of other manufacturer's products are beyond the control of Syngenta, and the quality of water may vary with location, all mixtures should be tested prior to mixing commercial quantities.

Fungicide Resistance Warning

SEGURIS FLEXI Fungicide is a Group 7, SDHI fungicide. Some naturally occurring individual fungi resistant to SEGURIS FLEXI and other Group 7 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungi population if these fungicides are used repeatedly. These resistant fungi will not be controlled by SEGURIS FLEXI and other Group 7 fungicides, thus resulting in a reduction in efficacy. Since the occurrence of resistant fungi is difficult to detect prior to use, Syngenta Australia Pty Ltd accepts no liability for any losses that may result from the failure of SEGURIS FLEXI to control resistant fungi.

Protection of wildlife, fish, crustaceans and environment

Very toxic to aquatic life. DO NOT contaminate wetlands or watercourses with this product or used containers.
