

[What you need to know about Callisto in under a minute | VIDEO](#)

Broadacre
18.10.2019

For anyone who hasn't been to a Learning Centre site in 2019 or heard what CALLISTO is, Syngenta Product Lead Garth Wickson sums it up here:

Highlights

- **New mode of action** pre-emergent herbicide in cereals controlling group B,C,D,F and I resistant weeds. Anticipated in 2020
- **Combine CALLISTO with BOXER GOLD** or other pre-emergent herbicides for **one pass broadleaf and grass weed control** for maximum yield
- **Long season residual** pre-emergent herbicide removes weed competition, whilst early post-emergent applications are reduced or delayed
- **Good crop safety** in wheat and barley, low use rates and short plant-back provides maximum flexibility
- **Improves spray logistics** by taking the pressure off post-em broadleaf herbicide programs
- **Novel, broad spectrum and widely adaptable** herbicide to manage hard to control broadleaf weeds in cereals like radish, sowthistle and double gee
