27.10.2019

Learning Centres represent a significant investment from Syngenta, with eight sites across Australia facilitating conversations around challenges, farming practices and new tools.

"The benefit of Learning Centres is that you're all in one place, being able to see a number of products performing at one time... being able to make direct comparisons between our technology and that of the competitors, and existing standards in the market," Syngenta Technical Services Manager Jason Sabeeney said.

"People get to see first hand the products performing, not in a laboratory, but in a real life situation."

The two products most asked about were CALLISTO and REFLEX. You can read more about them here:
