SALTRO

Last updated:

09.03.2020

Seedcare, Fungicide

Authorisation Number:

87705/119029

Composition:

200 g/L

Pydiflumetofen

Activity Group:

Group 7 Fungicide

Formulation:

Suspension Concentrate for Seed Treatment | FS

Controls seedling Blackleg in Canola.

Product CP: Tabs

Mixing and spraying

SALTRO® should be applied alone or in mixtures diluted with water in specialised seed treatment equipment suitable for flowable seed treatments. As for all such seed treatments, a good flow and metering system for the initial prepared solution is important. Depending on the type of seed treatment equipment, or mixtures being applied, it may be necessary to adjust the recommended amount of water in order to ensure an optimal flow of the solution and an even treatment of seed. Prepare the solution as follows:

1. Fill the solution tank with the required volume of water and mix with the appropriate volume of SALTRO. Total volumes of not less than 800 mL nor more than 1.6 L/100 kg seed are recommended.
 2. Switch on the agitation system and stir.
